

YOGGIE PICO PRO™

PERSONAL SECURITY APPLIANCE

Extending corporate-level security to traveling laptops

Yoggie Pico is the world's first Linux-based dedicated security computer, providing the most efficient, user-friendly and robust mobile security solution.

Alizian Authorised Yoggie Reseller

YOGGIE™ The Power to Be Free

Yoggie Pico Pro – A Linux-based computer inside a USB key

Yoggie Pico Pro, a robust security appliance with a hardened Linux-based OS, 520 Mhz CPU and 128 MB memory, has been especially designed and optimized for security. It features a dual flash memory mechanism which constitutes an "Untouchable Operating System" barrier. Yoggie Pico physically isolates the laptop from incoming Internet threats and protects it from both known and unknown attacks.

All-in-One Security

- Anti-Virus
- Anti-Spam
- Anti-Phishing
- Anti-Spyware
- Intrusion Detection (IDS)
- Intrusion Prevention (IPS)
- Firewall (Stateful Inspection)
- VPN
- Web Filtering
- Parental Content Control
- Adaptive Security Policy™
- Multi-Layer Security Agent™
- Layer-8 Security Engine™

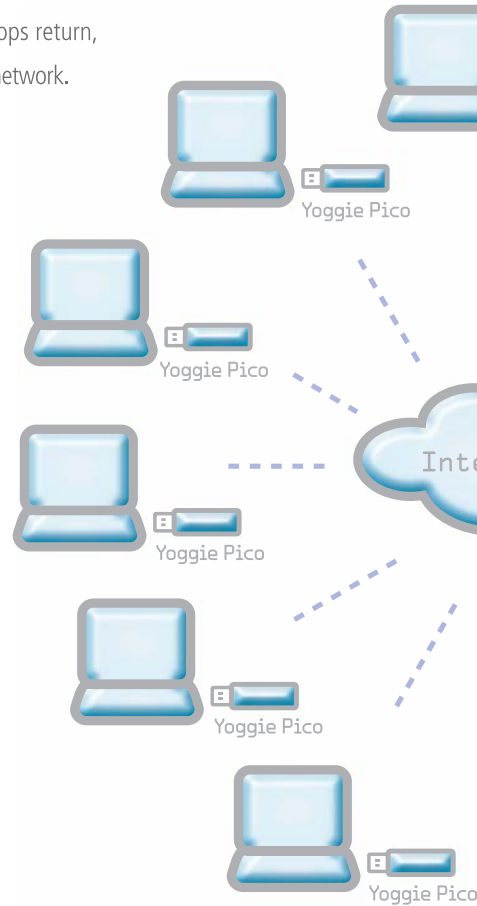

Stop security threats from ever reaching your laptop

Mobile & Remote Workforce – An IT Manager’s Nightmare

Traveling laptops are considered corporate-security weak spots. Inside the corporate network, computers are shielded from outside threats by hardware-based security, with the latest updates and security policies. But as soon as laptops leave the network they are susceptible to PC-related security vulnerabilities and dependant on whether or not the user downloaded the latest updates and security policies. As these laptops return, they may “infiltrate” security threats into the network.

Corporate Security

Yoggie Pico Pro™ extends the same level of security enforced within the corporate network to traveling laptops. All the security appliances that can be found in the corporate server room are packed into a tiny USB key-size security appliance with 13 security applications. Finally, the security of the entire corporate workforce, both inside and outside the network, is centrally managed and enforced by the IT organization.

One small device, and
Plug & Forget
You are completely safe!

Yoggie Management Server (YMS)

Yoggie Management Server™ monitors and manages the fleet of traveling Yoggie Pico devices. Installed in the IT server room, it provides security policy updates, signatures, and rule-base updates, while obtaining local logs and events for complete visibility. Finally, IT Security managers can protect their organization's mobile and remote platforms in a non-intrusive, yet consistent manner.

Extending corporate-level security to traveling laptops

Corporate Users Can Connect to Any Hotspot with Complete Peace of Mind

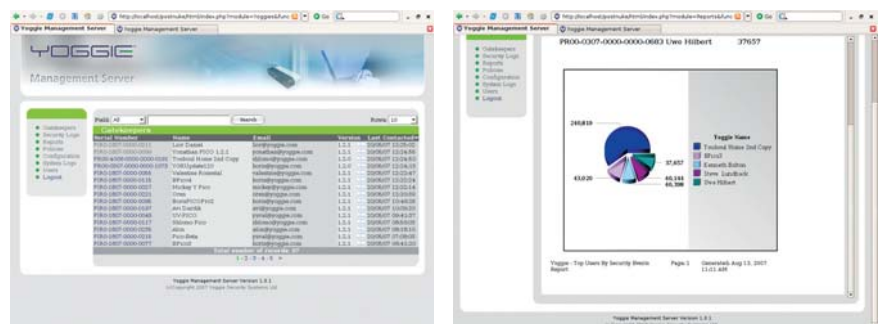

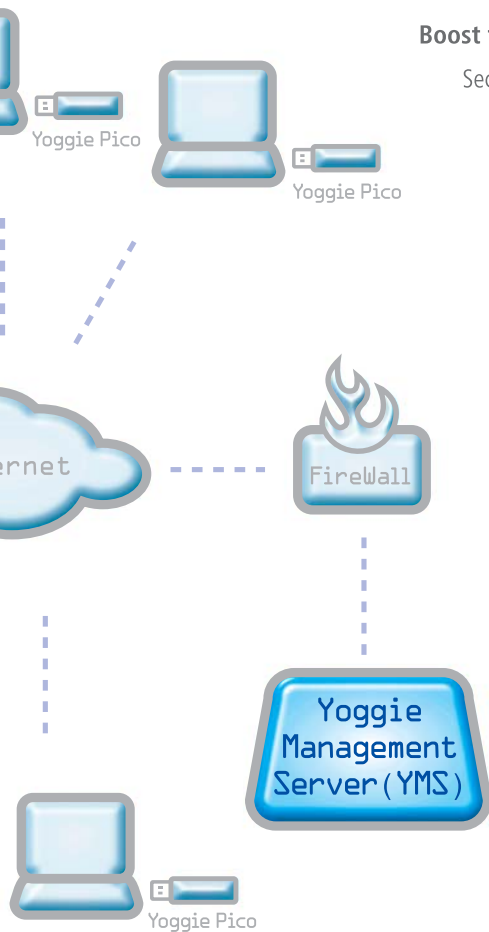

Internet Hotspots are notorious for their security risks. The fact that corporate users are connected to the same network shared by hundreds of users reveals the identity of their computer, exposing it to security threats. With Yoggie Pico, corporate users can connect to any unsecured hotspot, knowing that they are completely protected. Yoggie Pico isolates the laptop's IP Address, revealing only its own, and creates a physical barrier from incoming threats.

Boost the Laptop's Performance

Security software installed on a PC dramatically reduces its performance. PC World has recently revealed that one of the top selling security suites "may slow your PC unacceptably"*. Yoggie Pico frees the PC from security tasks. All the security applications operate within the Yoggie appliance in coordination – and with no security software conflicts or failures. In fact, PC World referred to the Yoggie solution as one which "employs cutting-edge security techniques without being a drain on the PC's performance". * PC World UK – May 2007

Transparent Security Policy Enforcement

Yoggie Pico settles the conflict between the user's desire for freedom and the IT manager's concern for security. The laptop's connection to the Internet is disabled unless Yoggie Pico is plugged-in. Users have complete freedom inside the safe computing environment, because the security policy is enforced outside the laptop (in the device).

Web-based centralized management and reports

13 Robust Security Layers

Yoggie Pico Pro features all of the security layers found in the corporate server room. The layers work harmoniously together to provide the ultimate security solution.

Layer-8 Security Engine™

Multi-Layer Security Agent™

Anti-Virus

Anti-Spyware

Anti-Phishing

Anti-Spam

Web Filtering

HTTP Proxy

FTP Proxy

POP3 Proxy

SMTP Proxy

Intrusion Detection and Prevention System

Firewall, NAT, VPN Client

YOGGIE PICO PRO™

PERSONAL SECURITY APPLIANCE

Advantages of Hardware Security

- Protects from the outside
- Keeps threats away from laptop
- Avoids Windows Operating System vulnerabilities
- Provides specialized security hardware
- Increases laptop performance
- Accumulates security updates on the device, not on the laptop

"Yoggie is to Internet Security what the Blackberry has been to Mobile Email access, a few years back."

David Lacey, Jericho Forum

"Essentially the product has the capability to provide mobile laptop users with consistent, corporate-level security on an anywhere, anytime basis."

Andrew Kellett, Butler Group

"...the most effective security measure an organization can deploy..."

Detective Sergeant Ken Griffiths, UK Police

Best Security

- Stops Internet threats before they reach your PC
- Security applications run on secured, dedicated hardware
- Includes a complete set of Enterprise-class, "Titanium Grade" security applications

Best Performance

- Frees PC resources to maximize performance
- Security updates reside on Yoggie Pico instead of your PC
- Saves CPU usage and memory
- Avoids security software conflicts, resulting in blue screens and system errors

Hassle Free

- Quick and simple installation
- Achieve "Titanium Grade Security" as soon as the Yoggie Pico is plugged in
- Automatic security updates and upgrades with no need for user interface

Weight: 18 gr./0.6 Oz. **Dimensions:** Length: 63 mm ; Width: 23 mm ; Depth: 12 mm / 16 mm (Cap off / Cap on)
